The Offshore Technology Research Center is a joint venture among the Texas A&M Engineering Experiment Station, Texas A&M University and The University of Texas at Austin. The center brings together engineering and science faculty and students from both Texas A&M and UT Austin to conduct research in the areas of deepwater platforms, slender and large body hydrodynamics, non-traditional materials and deep ocean seafloor engineering.

The center’s mission is to provide technology, expertise and services needed for the development of drilling, production and transportation systems that enable the safe and economically viable exploitation of hydrocarbon resources in deep and ultra-deep water.
